

FACT SHEET

REMOVAL OF ABBOTT'S MILL DAM REMNANTS ON THE GRAND RIVER

By

THE LAKE COUNTY ENGINEER'S OFFICE

James R. Gills, P.E., P.S., Lake County Engineer

- This project is located in the City of Painesville, Ohio on the lower Grand River under the East Main Street Bridge.
- This project is financed in part through a grant from the State of Ohio Environmental Protection Agency and the United States Environmental Protection Agency under the provisions of Section 319(h) of the Clean Water Act.
- This project will remove approximately 106 cubic yards of concrete and steel remnant dam materials from the Grand River.
- This project will improve floodplain access and natural flow along at least 500 linear feet of downstream areas on both banks.
- This project will reduce nonpoint source pollutant loadings to the Red Creek-Grand River water shed.
- This project will improve the flow regime of the lower Grand River and improve water quality by returning natural sediment transport to the river.
- This project will improve the flow regime of the lower Grand River and improve water quality by reducing riverbank erosion.
- This project will improve aquatic habitat and fish passage.
- This project has been approved for \$88,426 in Federal assistance.
- This project has been implemented consistent with recommendations within the Red Creek-Grand River TMDL and/or state-endorsed Watershed Action Plan.

This project was financed in part or totally through a grant from the State of Ohio Environmental Protection Agency and the United States Environmental Protection Agency under the provisions of Section 319(h) of the Clean Water Act.
